## Water pump pliers

The BRINKO pipe wrench BRlpowerXL with slip joint for larger pipe diameters and large-edged screw connections fits in every tool case despite its large diameter.

The maximum lever arm greatly facilitates work thanks to the optimum force transmission. The setting is made using an INOX pushbutton directly on the workpiece, and is extremely easy compared to a pipe wrench. The BRlpowerXL has a hand-friendly handle setting with finger clamp protection.

- Chrome-Vanadium-Steel, chrome-plated
- Grip surfaces are hardened inductively
- INOX pushbutton and spring
- Self-clamping to tubes and nuts
- With finger clamp protection
- Anti-slip handles, soft dip-insulated, yellow
- With pushbutton single-and adjustment
- 27-level fine adjustment

## Handwheel socket BRlwheelNut

1/2"

Art. no. 129-50

1/2" Ratchet

**Special tool with bars that can engage in the openings of handwheels and is driven by a 1/2" ratchet!**  
**Now even the most stubborn blockages can be removed with ease!**

### **A problem that every craftsman in the plumbing and heating industry knows!**

In the field of domestic water or heating supply, a component must be replaced. In order to facilitate this, shut-off devices such as valves or slide valves were installed in front of replaceable components during construction.

Now such a component as a water meter or a pump has to be replaced.

The valves or gates in front of and behind these components have not been moved for a long time and are therefore so tight that the force of the hand is not sufficient to move the valve or gate, let alone shut off the pipe tightly.

In order to achieve this, pliers, levers and obscure constructions are used. In most cases, this approach leads to the breakage of the cast iron handwheel, to bending or even to the tearing off of the spindle, since the rotational force is applied laterally.

The company BRINKO has addressed this nuisance and developed the handwheel socket BRlwheelNut.

The special tool, which is protected with a design pattern, consists of a basic body with protruding webs that engage in the openings of almost all handwheels and that can be driven with a 1/2" ratchet. Due to the force applied centrally from above and the distribution of the pressure points over several surfaces, a non-destructive actuation of valves and slides is made possible.

The time saved and the avoided hassle of removing a destroyed valve with complete shut-off of the water supply or running a heating system empty with subsequent venting of all radiators makes the BRlwheelNut an indispensable and cost-saving helper.

## DIAMOND tile drilling set BRIspeedDrill

Art. no. 13810

7pieces

NEW

**Achieve clean and precise hole drilling in tiles and porcelain stoneware tiles - with BRIspeedDrill, the most economical and fastest method!**

Bathrooms are no longer just functional spaces; they have evolved into wellness oases. Tiles are still the preferred choice for wall and floor coverings. However, things change here too: tiles and porcelain stoneware tiles are getting larger, thicker, and above all, harder.

When drilling with diamond drills, it is important to note that the hole is ground into the material rather than drilled. Diamond drilling is a grinding technique. Therefore, a 6 mm diamond drill requires a speed of 8,000 RPM. Grinding techniques require speed. Diamond drilling with, for example, a cordless screwdriver (approximately 1,300 RPM) is therefore only a makeshift solution and carries the risk of the drill slipping when starting (diamond drills do not have a centring point).

The new BRIspeedDrill set from BRINKO offers the advantage of a small, handy machine that is easy to use. In contrast to the BRIspeedDrill, working with an angle grinder in confined workspaces is very difficult. By precisely positioning with our BRIspeedDrill, the mounting holes are also covered by the usually very small cover rosettes.

Another advantage is the suitable speed of approximately 8,000 RPM compared to the angle grinder, which operates at 11,000 to 17,000 RPM and thus increases wear on the diamond drills.

- 230 V AC or 18 V DC operation with emergency light function
- Designed and certified for use on construction sites, both indoors and for temporary outdoor use

This versatile hybrid (230 V & battery) work light is specially designed for professional craftsmen, mechanics, and construction workers who are often on the go. It comes equipped with a battery holder suitable for 18 V batteries from **HAUPA, Makita, Dewalt, Milwaukee, Bosch (AMP Share), Metabo (CAS)**.

The corresponding adapters are included, eliminating the need to purchase an additional battery system.

The work light is dimmable in two stages (50%, 25%), has a cool white colour temperature (5,000 K), and a colour rendering index of RA >90. The operating time ranges from 2.5 to 9 hours (based on an 18 V/5 AH battery), depending on the selected light output mode. This work light is equipped with technology that prevents overheating and deep discharge of the battery.

**The batteries must be charged with the manufacturers' charging stations and are not included.**

In addition to batteries, the work light can also be powered by the included 5 m long connection cable H07RN-F 3G 1.5 mm<sup>2</sup>. This work light is equipped with a socket (max. 3000 W), allowing the connection of another light, power tool, or other device, eliminating the need for additional extension cords.

**Safety: In the event of a power outage, this work light automatically switches to battery operation within approximately 0.5 seconds, ensuring you never sit in the dark and minimizing the risk of injuries and damage.**
